	SUPERV	ANIEL P. STODOLA ISORY PATENT EXAMIN NOLOGY CENTER 3600	

U.S. Patent and Trademark Office PTOL-303 (Rev. 11-03) Continuation of 5. does NOT place the application in condition for allowance because: The examiner advances that Shibasaki discloses the sealing portion being spaced from the support member by the anchor portion, where the anchor portions act as intermediate elements between the sealing member and the support member (figure 4). The examiner also states that the anchor portions dog extend laterally from a first side of the support member when the sealing lip resides in an inoperative position, as the seal of Shibasaki lies substantially linear when the seal is in an inoperative position (figure 4). Shibasaki also discloses the sealing lip being retained in an operative position by the anchor portion being trapped in face-to-face contact with the first side of the support member, where the seal is arranged in a U-shape manner forcing a face-to-face relationship. Additionally, Shibasaki discloses the hinge connection being isolated from movement by the groove to which the seal resides. Finally, whether an element is called a sealing part or a sealing portion, as long as the element's structure is anticipated, the name of the element is negateable.
